1. GMDN Website – Search – Step-by-Step Guide

This is a Step-by-Step Guide for searching for GMDN Codes using the GMDN website.

The GMDN Search uses a 'browser like' search algorithm to find GMDN Terms using key words.

1. Logon to the GMDN Database using your Username and Password.

2. Click on **Search** on the **Terms** dropdown menu.

2. In the box, type in the keyword(s) for the medical device you are looking for.

Formatting the search text can help narrow down the search. For example:

cardiac OR catheter creates an 'either of the words' filter and will produce over 1,170 results.

cardiac catheter is an 'all of the words' filter and will produce over 110 results.

"cardiac catheter" uses "the exact phrase" filter and will produce about 20 results.

cardiac NOT valve will remove the word 'valve' from the 'cardiac catheter' results.

GMDN Code (Example 12345) will return the relevant GMDN Term.

4. The **Advanced** tab provides additional filters to narrow the search by Term Modification Date.

Specific searches can include 'obsolete' GMDN Terms.

In the example below, the Advance search criteria is looking for all Terms that contain the word 'stent' that have been modified in the 'last 6 months' that will also include 'obsolete' Terms.

Name	Code	Status
Drug-eluting paranasal sinus stent		Active

A bioabsorbable device with a drug coating intended to be implanted into a paranasal sinus (e.g., frontal, sphenoidal, ethmoidal, maxillary) to maintain sinus patency in the treatment of chronic sinusitis. The drug coating is intended to reduce inflammation and polyps to facilitate the separation of sinus mucosal tissues. The device is made of synthetic polymer(s) capable of being degraded and absorbed by body tissues, and is designed to allow for the slow release of the drug coating. It is endoscopically implanted via the nasal passageway; disposable devices associated with implantation may be included.
